QUALITY POLICY

The Management of OR.P. Stampi S.r.l. considers the Quality Management System (QMS) a fundamental pillar to ensure the company's competitiveness, operational excellence, and full customer satisfaction. The commitment to quality is expressed through a systemic management approach, in line with the requirements of UNI EN ISO 9001:2015, and with the aim of continuously improving the effectiveness and efficiency of company processes.

The organization regularly analyzes the internal and external context in which it operates, assessing the variables that influence its management system and its ability to generate value for stakeholders. The needs, expectations, and requirements of relevant interested parties, including customers, suppliers, employees, regulatory bodies, and local communities, are identified, monitored, and integrated into strategic and operational planning, ensuring consistency with the company's strategic direction.

The QMS is based on a process approach, aimed at ensuring the interconnection and effectiveness of business activities, and on a risk and opportunity management perspective. Risk-based thinking is applied at every stage, from planning to operational control, enabling the anticipation of critical issues, the identification of improvement opportunities, the prevention of non-conformities, and the strengthening of the company's ability to achieve its objectives.

OR.P. Stampi is committed to fully complying with applicable legal, regulatory, and contractual requirements, ensuring that every product and service meets high standards of quality, safety, reliability, and compliance. The company aims to ensure the reproducibility and traceability of production processes, enhancing acquired expertise and promoting technological innovation and operational efficiency.

Health and safety in the workplace are an absolute priority, ensured through compliance with current regulations (Legislative Decree 81/2008) and the promotion of a prevention culture. At the same time, OR.P. Stampi is committed to environmental sustainability, focusing on reducing the impact of its processes and complying with environmental regulations.

In line with a responsible vision for the future, the organization recognizes climate change as a relevant factor in risk management and strategic definition. For this reason, its potential impacts are considered in the planning and development of business activities.

Management actively promotes professional growth and the development of employee skills through training programs, continuous updating, and direct involvement in quality management. The objective is to ensure qualified, motivated personnel who are aware of their contribution to the organization's success.

Management defines measurable objectives consistent with this Policy, monitors their progress, and ensures the resources necessary for maintaining and improving the Quality Management System, guaranteeing constant alignment with market needs and with principles of social responsibility and sustainability.
